

```
int findSpecialInteger(int* arr, int arrSize)
{
    int count = 1;

    for (int i = 1; i < arrSize; i++)
    {
        if (arr[i] == arr[i - 1])
        {
            count++;
        }
        else
        {
            count = 1;
        }

        if (count * 4 > arrSize)
        {
            return arr[i];
        }
    }

    return arr[0];
}
```
